

How to map an Alfresco space to a Windows drive letter

Open the Map Network Drive dialog. For example, open the File Manager, right click on the Computer icon, and select “Map network drive...”. Pick the drive letter of your choice and enter the Folder as below. Select Reconnect at logon if desired. “Connect using different credentials” should be checked. Finally, click Finish.

The Windows Security dialog will appear next. Enter your Alfresco user with “biostats.mc.vanderbilt.edu\” first. Then enter your Alfresco password. Click OK.

If you’ve done everything right, you will see the share appear in the File Manager.
