

For Windows and Mac users, please go to

<https://biostat.app.vumc.org/wiki/Main/PowerSampleSize#Windows>

Downloading and Installing the PS Software

The PS program runs on the Microsoft Windows operating systems (Windows XP and later). We have also installed the program on Linux and Macintosh computers using a program called [Wine](#) that facilitates running Windows software on other operating systems.

Windows

Download pssetup3.exe. After downloading to your computer, run pssetup3.exe (please read the instructions below for Mac users).

For Mac users, please follow the steps to install WINE^{HQ} to mimic the Windows installation process on your Mac.

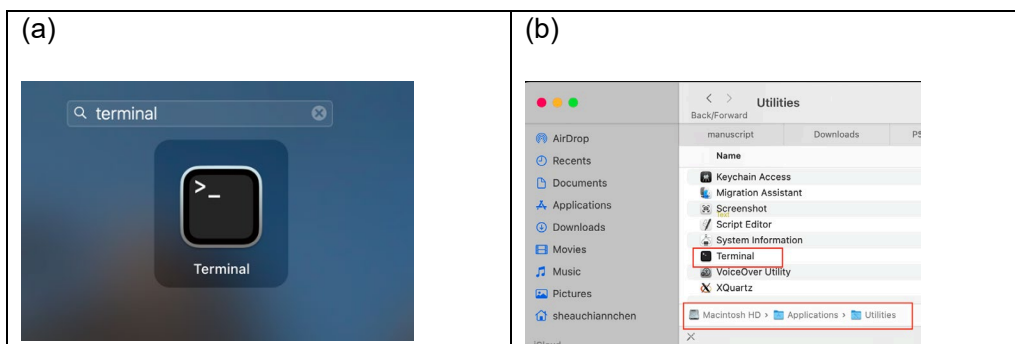

PLEASE NOTE

On the PS software website, PlayOnMac is introduced to run pssetup3.exe. However, PlayOnMac may not support your recent or current MacOS version. We strongly recommend installing WINE^{HQ} directly instead of PlayOnMac (and XQuartz).

Step 1 Open the Terminal on your Mac

Do *one of the following* on your Mac: (a) or (b)

- (a) Click the Launchpad icon in the Dock, type Terminal in the search field, then click Terminal.
- (b) Open the /Applications/Utilities folder in the Finder, then double-click Terminal.

Step 1.1 Check if Homebrew is installed. Please type the command line after prompt (\$ or %) in Mac Terminal.

```
brew --version
```

(a) You can check the brew version if you have installed it. Please go to **Step 2**.

```
[SheauChiannsMBP:~ sheauchiannchen$ brew --version  
Homebrew 4.1.14-37-gde575da  
Homebrew/homebrew-core (git revision 15ef748a60; last commit 2021-03-03)
```

(b) Homebrew should be installed if it shows “command not found.” Please finish Step 1.2 to Step 1.4

```
[chiann@SheauChiannsAir ~ % brew --version  
zsh: command not found: brew
```

Step 1.2 Install Homebrew on Terminal if you see “command not found: brew .” Type the following command line (after prompt). It may take 1 minute to install Homebrew.

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

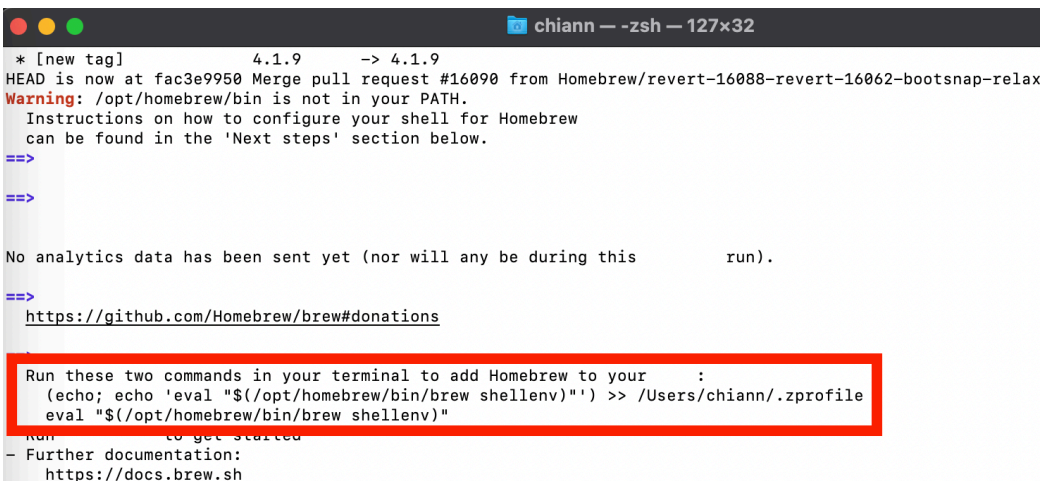

Example:

```
chiann — zsh — 127x32  
chiann@SheauChiannsAir ~ % /bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

Enter your computer password if needed.

Step 1.3 Instructions on configuring your shell for Homebrew (if you see a **warning** on the screen). Please find the information marked in red below on your Terminal screen. Copy two commands **from your Terminal** and run it.

```
chiann — zsh — 127x32  
* [new tag] 4.1.9 -> 4.1.9  
HEAD is now at fac3e9950 Merge pull request #16090 from Homebrew/revert-16088-revert-16062-bootsnap-relax  
Warning: /opt/homebrew/bin is not in your PATH.  
Instructions on how to configure your shell for Homebrew  
can be found in the 'Next steps' section below.  
=>  
=>  
  
No analytics data has been sent yet (nor will any be during this run).  
=>  
https://github.com/Homebrew/brew#donations  
  
Run these two commands in your terminal to add Homebrew to your :  
(echo; echo 'eval "$(/opt/homebrew/bin/brew shellenv)'"') >> /Users/chiann/.zprofile  
eval "$(/opt/homebrew/bin/brew shellenv)"  
non to get started  
- Further documentation:  
https://docs.brew.sh
```

Please use **your command lines** and do not use mine.

```
(echo; echo 'eval "$(/opt/homebrew/bin/brew shellenv)"') >> /Users/chiann/.zprofile
eval "$(/opt/homebrew/bin/brew shellenv)"
```

```
chiann@SheauChiannsAir ~ % (echo; echo 'eval "$(/opt/homebrew/bin/brew shellenv)"') >> /Users/chiann/.zprofile
chiann@SheauChiannsAir ~ % eval "$(/opt/homebrew/bin/brew shellenv)"
```

Step 1.4 Use the command line in Step 1.1 to check again

```
chiann@SheauChiannsAir ~ % which brew
/opt/homebrew/bin/brew
chiann@SheauChiannsAir ~ % brew --version
Homebrew 4.1.14
```

If you cannot install Homebrew successfully, please visit <https://docs.brew.sh/Installation> for your macOS or contact Sheau-Chiann Chen (sheau-chiann.chen.1@vumc.org).

macOS requirements for Homebrew installation in this instruction

- A 64-bit Intel CPU or Apple Silicon CPU ¹
- macOS Monterey (12) (or higher) ²
- Command Line Tools (CLT) for Xcode (from `xcode-select --install` <https://developer.apple.com/download/all/>) or **Xcode** ³
- The Bourne-again shell for installation (i.e. `bash`)

Step 2 Install WINE^{HQ} from the command line on Terminal.

(1) Please type the following command and hit a return.

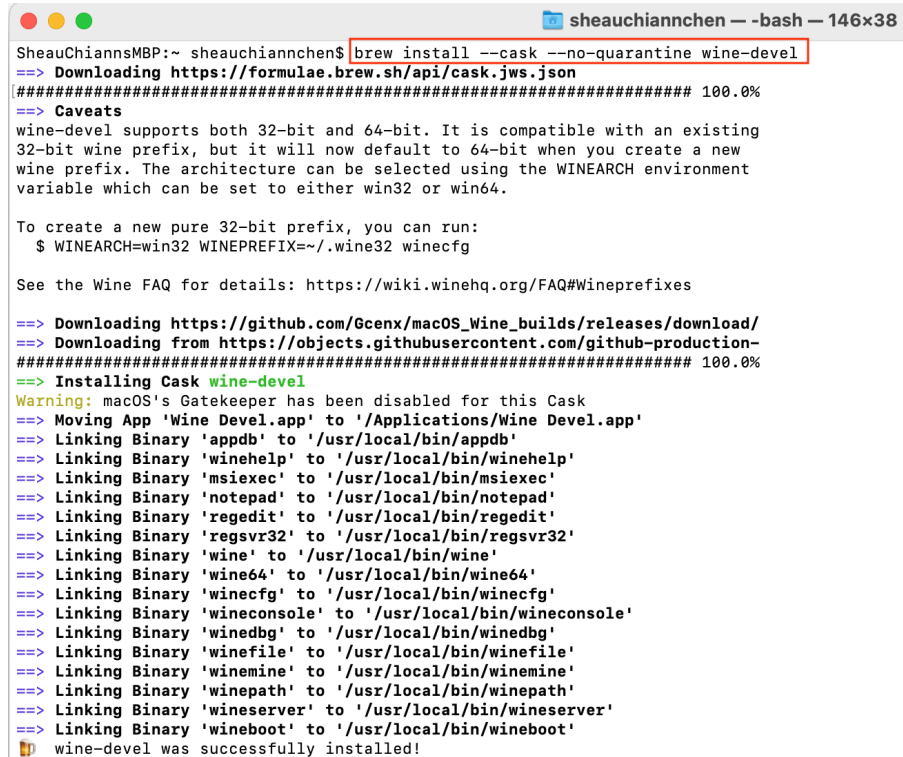

```
brew tap homebrew/cask-versions
```

Here is what you would see in your Terminal.

```
sheauchiannchen ~ -bash — 146x38
SheauChiannsMBP:~ sheauchiannchen$ brew tap homebrew/cask-versions
==> Downloading https://ghcr.io/v2/homebrew/portable-ruby/portable-ruby/blobs/sha256:61029cec31c67a
##### 100.0%
==> Pouring portable-ruby-2.6.10_1.el_capitan.bottle.tar.gz
==> Tapping homebrew/cask-versions

```

- (2) Please type the following command and hit a return. You will see the message “wine-devel was successfully installed!

```
brew install --cask --no-quarantine wine-devel
```

```
sheauchiannchen — -bash — 146x38
SheauChiannsMBP:~ sheauchiannchen$ brew install --cask --no-quarantine wine-devel
==> Downloading https://formulae.brew.sh/api/cask.jws.json
##### 100.0%
==> Caveats
wine-devel supports both 32-bit and 64-bit. It is compatible with an existing
32-bit wine prefix, but it will now default to 64-bit when you create a new
wine prefix. The architecture can be selected using the WINEARCH environment
variable which can be set to either win32 or win64.

To create a new pure 32-bit prefix, you can run:
  $ WINEARCH=win32 WINEPREFIX=~/.wine32 winecfg

See the Wine FAQ for details: https://wiki.winehq.org/FAQ#Wineprefixes

wine-devel was successfully installed!
```

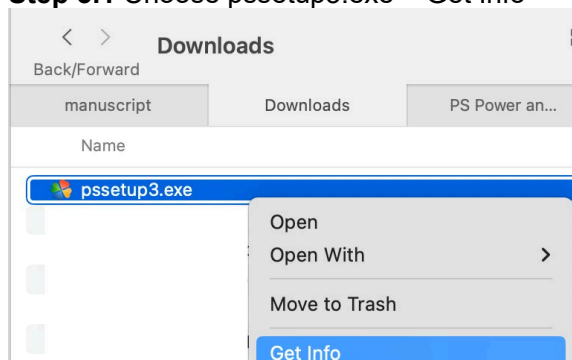

<https://wiki.winehq.org/MacOS> for viewing more wine packages (optional)

- (3) (Optional) You can type which Wine to find the location you installed
SheauChiannsMBP:~ sheauchiannchen\$ which wine
/usr/local/bin/wine

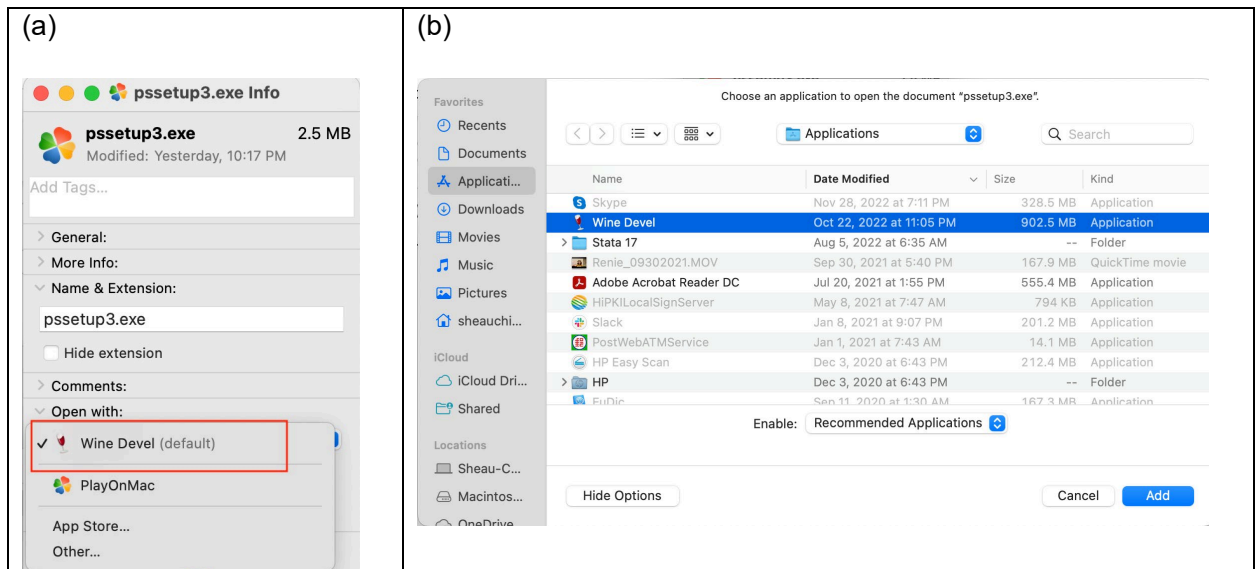

- (4) You can type “exit” to logout your Terminal and close it.

Step 3 set up pssetup3.exe to open with Wine.

Step 3.1 Choose pssetup3.exe > Get Info

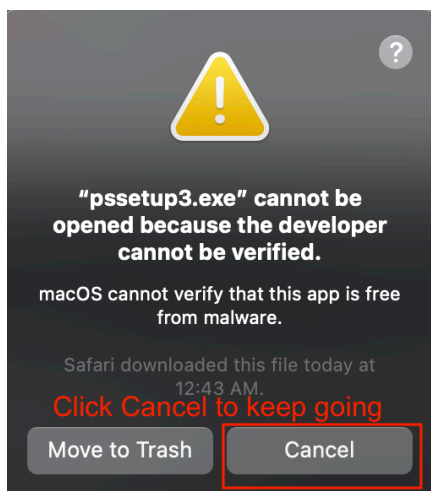

Step 3.2 Select (a) “Wine Devel” or (b) Click “Other....” If you did not see “Wine Devel” on the list. Click “Change All...”

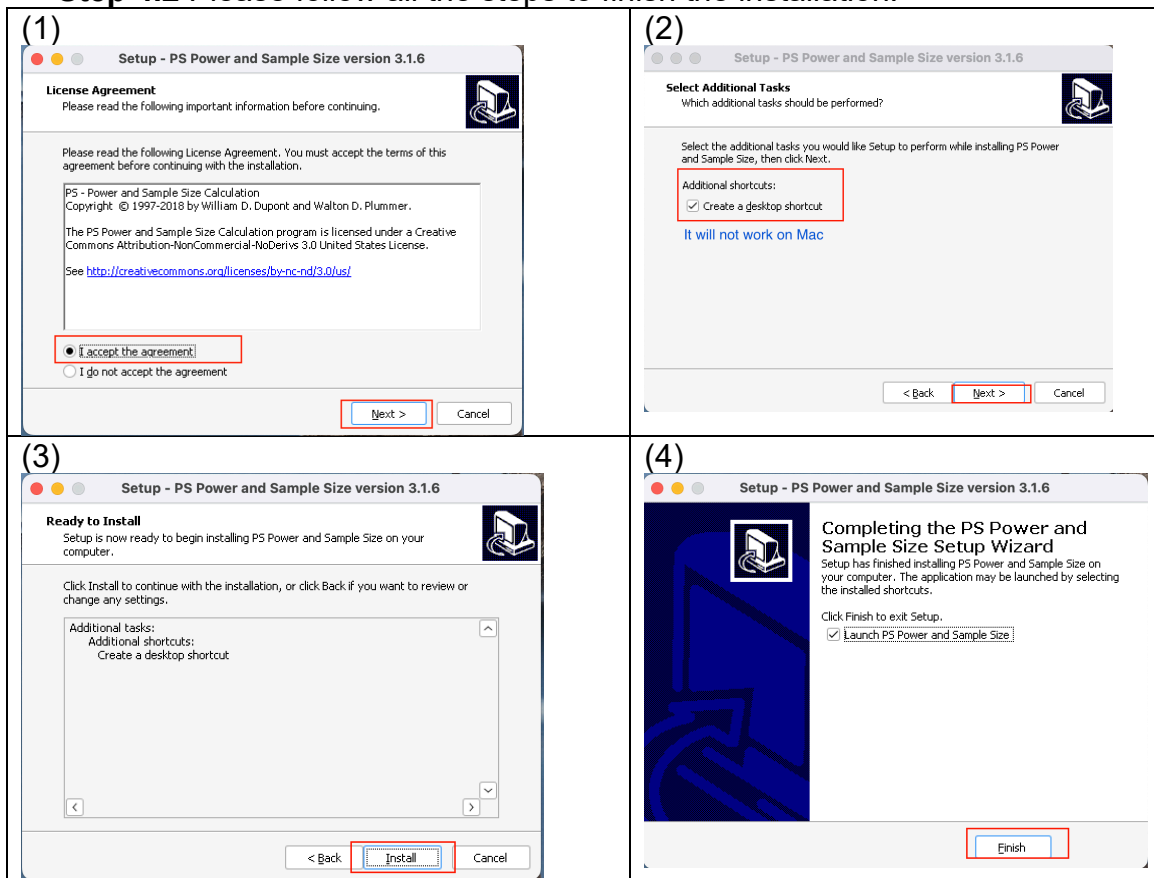

Step 4 Install PS software

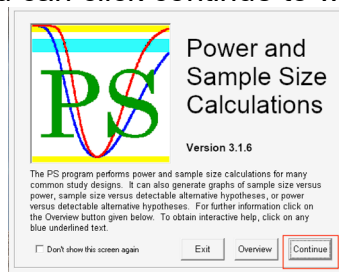

Step 4.1 Double click pssetup3.exe to install PS software

Step 4.2 Please follow all the steps to finish the installation.

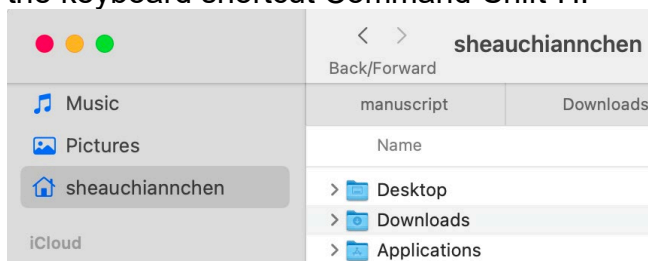

Congratulations! You can click continue to work with PS software.

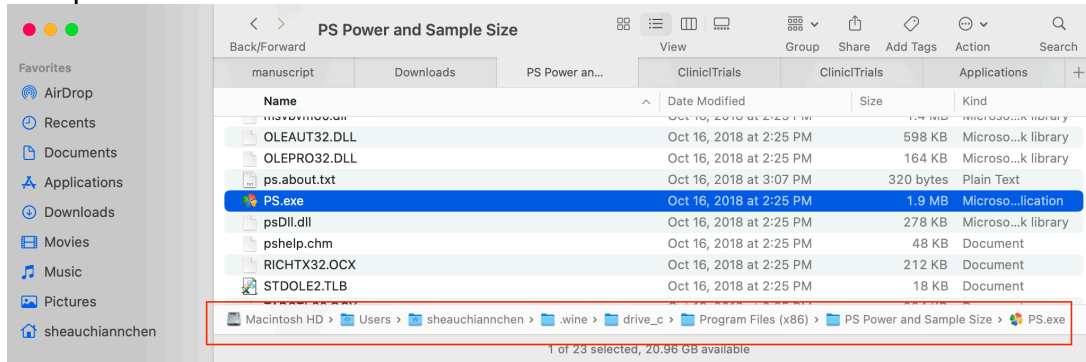

Step 5 Create a desktop shortcut to avoid redoing Step 4 every time.

Step 5.1 Go to your home folder. To find your home folder, open Finder and use the keyboard shortcut Command-Shift-H.

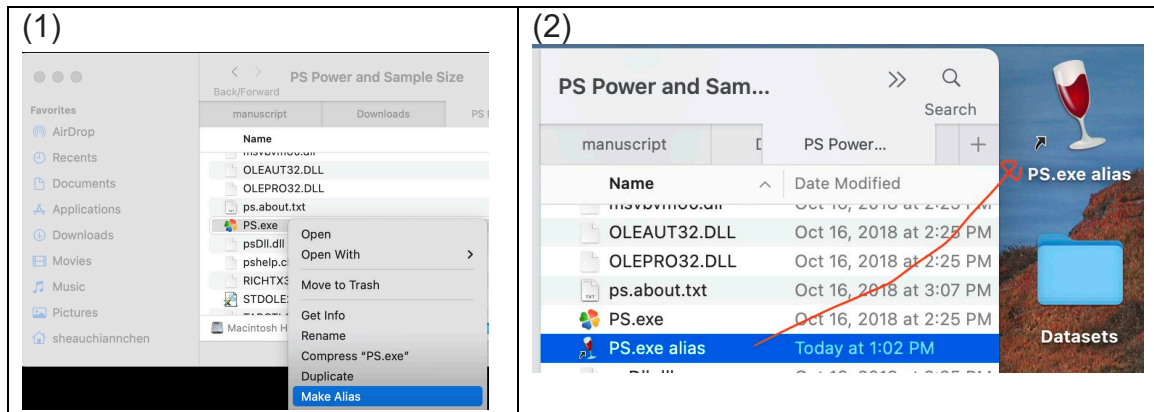

Step 5.2 Press **Command + Shift + .** (the period key). This will show hidden files in the folder.

Step 5.3 After hidden files are shown in your home folder, you will see “.wine” folder under your home. Go to .wine/drive_c/Program Files(x86)/PS Power and Sample Size/

Step 5.4 Select the “PS.exe”, then choose File > Make Alias (or right-click). (1) You can create a PS.exe alias for PS.exe, then (2) drag “PS.exe alias” to the desktop. Click “PS.exe alias” for the use of PS software.

Step 5.5 (Importantly) Go back to your home folder. To hide the files again, press Command + Shift + . again, in case we accidentally delete the important stuff.

MacOS Information about the laptop that I tried to install successfully

Laptop 1

MacBook Pro
Processor 2.3 GHz Dual-Core Intel Core i5
macOS Ventura 13.6

Laptop 2

MacBook Air
Chip Apple M1
macOS Ventura 13.4.1
